

12. (Currently Amended) A container blank for a truncated cone shaped sidewall portion of a disposable thermally insulated paper cup, comprising:

(a) at least one substrate layer made of disposable material; and

(b) at least one shrink film layer connected to said at least one substrate layer.

13. (Original) The container blank of claim 1, wherein at least one portion of said at least one film layer is adapted to shrink away from said at least one substrate layer in at least one pattern upon application of heat.

14. (Original) The container blank of claim 3, wherein at least one portion of said at least one film layer is adapted to shrink away from said at least one substrate layer in at least one pattern upon application of heat.

15. (Original) The container blank of claim 5, wherein at least one portion of said at least one film layer is adapted to shrink away from said at least one substrate layer in at least one pattern upon application of heat.

16. (Original) The container blank of claim 13, wherein said at least one shrink pattern comprises at least one generally vertical air pocket.

17. (Cancelled)

18. (Original) The container blank of claim 13, wherein said at least one shrink pattern comprises a plurality of seal spots.

19. (Original) The container blank of claim 13, wherein said at least one shrink pattern comprises at least one generally horizontal air pocket.

20. (Original) The container blank of claim 14, wherein said at least one shrink pattern comprises at least one generally vertical air pocket.

21. (Cancelled)

22. (Original) The container blank of claim 14, wherein said at least one shrink pattern comprises a plurality of seal spots.

23. (Original) The container blank of claim 14, wherein said at least one shrink pattern comprises at least one generally horizontal air pocket.

24. (Original) The container blank of claim 15, wherein said at least one shrink pattern comprises at least one generally vertical air pocket.

25. (Cancelled)

26. (Original) The container blank of claim 15, wherein said at least one shrink pattern comprises a plurality of seal spots.

27. (Original) The container blank of claim 15, wherein said at least one shrink pattern comprises at least one generally horizontal air pocket.
